
Ne VIII λ770 f = 0.102, b_fid = 22.8 km s^−1, τ_0 = 1 at log N = 14.29
single component, b = 11 km s^−1
single component, b = 24 km s^−1
single component, b = 47 km s^−1
two components, log N = 13.7 each
two components, log N = 14.3 each
two components, log N = 14.9 each
S/N per resolution element
resolving power R
COS G140L
COS G130M/G160M
STIS E140M
HIRES/UVES
min. detectable log N (3σ)
Δv_min [km s^−1] (3σ)
Δv_min = Δv_S (Sparrow); above: resolved below the classical limit
existing spectrographs (nominal R)
