
O VI λ1032 f = 0.133, b_fid = 18.4 km s^−1, τ_0 = 1 at log N = 13.95
single component, b = 9 km s^−1
single component, b = 20 km s^−1
single component, b = 38 km s^−1
two components, log N = 13.3 each
two components, log N = 13.9 each
two components, log N = 14.6 each
COS G140L
COS G130M/G160M
STIS E140M
HIRES/UVES
S/N per resolution element
resolving power R
min. detectable log N (3σ)
Δv_min [km s^−1] (3σ)
Δv_min = Δv_S (Sparrow); above: resolved below the classical limit
existing spectrographs (nominal R)
